## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claim 1 and 7-46 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Applicant's invention can be distinguished from prior art by the claimed arrangement of "switch elements" (preferably field effect transistors) that "switchably connect a semiconductor region" (preferably a well region) and "power supply wirings" to "control voltage applied to *the* semiconductor region" (preferably for controlling threshold voltages of transistors in a logic operations circuit by controlling voltage applied to well regions by means of the switch elements).

For example, the claimed switch elements include "a plurality of field effect transistors which are not used in performing logic operations of a logic circuit," yet are claimed to be arranged in a semiconductor region where transistors performing logic operations are also arranged (i.e. *the* semiconductor region).

Applicant's claimed invention employs a more efficient arrangement of switch elements that control voltage applied to a well region, for example, wherein the switch arrangement is included in the semiconductor region controlled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
